SUMMARY

eJPT-certified cybersecurity undergraduate at SLIIT with hands-on practice in network enumeration, web application testing and Linux privilege escalation. Developed a Python TCP port scanner; currently leading a four-member academic DevSecOps project. Seeking a cybersecurity internship or junior penetration testing role, bringing practical lab experience, security automation and clear technical documentation.

TECHNICAL SKILLS

Security: Penetration testing, vulnerability assessment, OWASP Top 10, SQL injection, XSS, Linux privilege escalation, STRIDE threat modelling

Tools: Nmap, Burp Suite, Metasploit, Wireshark, Semgrep, Trivy, Gitleaks

Programming and systems: Python, SQL, Java, C, TCP/IP, HTTP, Linux (Kali and Ubuntu), Git

DevSecOps: Docker Compose, GitHub Actions, CI/CD, SAST, dependency and secrets scanning

PROJECT EXPERIENCE

Multi Threaded TCP Port Scanner

Personal project | github.com/JATHURSHAN-R/py-port-scanner

- Built a Python TCP connect scanner using sockets and ThreadPoolExecutor, with configurable workers, timeouts and port ranges; no third-party scanning libraries.
- Implemented banner grabbing for five protocols (SSH, FTP, SMTP, HTTP and HTTPS) and timestamped JSON and HTML reports for reviewing discovered services.
- Documented a localhost test scanning 10,000 ports in 2.88 seconds and identifying three open ports.

DVWA DevSecOps Pipeline

Team leader | Academic group project | github.com/JATHURSHAN-R/IE3142-DVWA-DevSecOps

- Lead a four-member team, coordinating module ownership and integration across SQL injection, stored XSS, file upload and session security work.
- Contributed SQL injection remediation and build validation with PHP syntax, database connectivity, SQL regression and login-page checks in GitHub Actions.
- Implemented Trivy container scanning that fails on HIGH or CRITICAL findings; helped integrate Semgrep, Composer audit and Gitleaks reports into the shared workflow.

Northwind Logistics Breach CTF

Academic group project | github.com/JATHURSHAN-R/northwind-ctf

- Contributed to a six-stage CTF covering OSINT, steganography, web security, cryptography, packet analysis and Linux privilege escalation using Python, Flask and Docker Compose.

HANDS ON SECURITY PRACTICE

- Practise service enumeration, web application testing and Linux privilege escalation in Hack The Box and TryHackMe labs, supported by Nmap, Burp Suite and Wireshark.
- Published two Hack The Box writeups for Nexus and TwoMillion in a GitHub cybersecurity-writeups repository, showcasing technical documentation alongside lab practice.

CERTIFICATIONS AND TRAINING

eJPT - INE Junior Penetration Tester, 2026 | ISC2 Certified in Cybersecurity (CC), 2026

Training: TryHackMe SOC Level 1 learning path (2026), Advent of Cyber 2025; Hack The Box Academy Linux Fundamentals and Web Requests.

EDUCATION

BSc (Hons) in Information Technology, specializing in Cyber Security

Sri Lanka Institute of Information Technology (SLIIT), Sri Lanka | Undergraduate

Languages: English, Tamil
